Specialized Training: Investigating Sexual Abuse in Correctional Settings
Notification of Curriculum Utilization
December 2013

The enclosed Specialized Training: Investigating Sexual Abuse in Correctional Settings curriculum was developed by The Moss Group, Inc. (TMG) as part of contract deliverables for the National PREA Resource Center (PRC), a cooperative agreement between the National Council on Crime and Delinquency (NCCD) and the Bureau of Justice Assistance (BJA). The PREA standards served as the basis for the curriculum’s content and development with the goal of the Specialized Training: Investigating Sexual Abuse in Correctional Settings curriculum to satisfy specific PREA standard requirements.

It is recommended that the Specialized Training: Investigating Sexual Abuse in Correctional Settings curriculum be reviewed in its entirety before choosing which modules to use. Any alterations to the original materials must be acknowledged during their presentation or requires removal of the PRC and TMG logos.

BJA is currently undergoing a comprehensive review of the enclosed curriculum for official approval at which point the BJA logo may be added.

Note: Utilization of the enclosed curriculum, either in part or whole, does not guarantee that an auditor will find a facility “meets standard”. Rather, an auditor will take into consideration the curriculum used as part of their overall determination of compliance.
Module 5: Role of Medical and Mental Health Practitioners in Investigations

Time: 3:15 p.m. – 4:45 p.m. (1 hour and 30 min)

Training Objectives:

1. Understand the PREA standards applying to medical and mental health care practitioners in the investigative process
2. Describe the steps of the forensic medical exam process
3. Explain the role of victim advocates

Materials Needed:

1. Easel pad and markers
2. PowerPoint® player/machine (lap top computer and LCD projector)
3. Screen or monitor
4. Handout: United States Department of Justice National Standards to Prevent, Detect, and Respond to Prison Rape (2012). Note that both the Prison and Jails Standards and the Juvenile Standards are provided as handouts. Select the set of standards appropriate to the population of your agency.

This module was developed by Christine Kregg of Just Detention International and Charma Blount of the Texas Department of Criminal Justice in conjunction with The Moss Group, Inc.

Training Tips:

• The purpose of this module is to educate investigators on the role of medical and mental health staff in the investigative process, and encourage them to collaborate with the appropriate practitioners to enhance communication, victim outcomes, and the investigative process.
• Consider bringing someone from your medical or mental health department to co-present this module and speak to agency policy and practices in the areas discussed in this module. Additionally, the central portion of this module is an in-depth overview of the forensic medical exam process. Consider bringing in a Sexual Assault Nurse Examiner (SANE) or someone from your medical department who has been appropriately trained to present that section of the module.

Provide participants with a full copy of the PREA standards appropriate to the population of their agency. State that you will only be going over select standards, but you encourage them to review the full set of standards at their convenience.

Note that this module does not address all the PREA Standards. It only addresses those standards addressing the role of medical and mental health staff in investigations.
Evidence Protocol and Forensic Exams

$115.212 Evidence protocol and forensic medical examinations
- Follow a uniform evidence protocol that is developmentally appropriate and based on DOJ’s National Protocol for Sexual Assault Medical Forensic Exams, Adults/Adolescents®.
- Offer all survivors access to exams, at no cost, when appropriate.
- Exams must be performed by qualified medical professionals, such as Sexual Assault Nurse Examiners.

*®A National Protocol for Sexual Assault Medical Forensic Examinations, Adults/Adolescents is available at https://www.ncbi.nlm.nih.gov/books/NBK500663/.

The PREA Standards require that investigations are conducted according to a uniform evidence protocol. The Standards recommend following the protocol in the U.S. Department of Justice’s Office on Violence Against Women publication, A National Protocol for Sexual Assault Medical Forensic Examinations, Adults/Adolescents.

The purpose behind standard 115.21 is
- To ensure all investigations are conducted using a consistent process, and
- To ensure the process is in line with best practice.

One element of the protocol that is required by the standards is the forensic medical exam. The standards require that all victims of sexual abuse be offered a forensic medical exam and that the exam be free of charge to the victim. Additionally, the standards require that the agency attempt to ensure that the exam be conducted by a Sexual Assault Nurse Examiner (SANE) or a Sexual Assault Forensic Examiner (SAFE) or, short of that, by other qualified medical practitioners.

Insert agency policy regarding provision of forensic medical exams.
The standards also require that victim advocates from rape crisis centers be made available to victims, if possible.

Why do we need outside advocates? Outside advocates can be truly independent and impartial since their sole focus is on the well-being of the victim. As a result, they can develop a relationship with the victim that may allow them to provide support that the victim may otherwise be unable to access.

If you are unable to access a victim advocate from a Rape Crisis Center, be aware that there are agencies outside of Rape Crisis Centers that can provide victim advocates, including mental health service agencies, drug treatment agencies, and sexual health agencies.
entire investigative process, including the interviews. This module will discuss the role of the victim advocate and how their presence can benefit the investigator in more depth later in the module.

1 min

Specialized Training

§115.335(a) Specialized training: Medical and mental health care
Ensure medical and mental health staff are trained in:
• How to detect and assess for signs of sexual abuse and harassment
• How to preserve physical evidence of sexual abuse
• How to respond professionally to victims
• How and to whom to report allegations or suspicions of sexual abuse or harassment

Just as investigators receive specialized training, so do medical/mental health care practitioners. Note that the training requirement is learning how to preserve, not collect, evidence. This is because, ideally, the agency practitioners will not be performing the forensic medical exam in which the evidence is actually conducted.

1 min

Specialized Training, Cont.

§115.335(b-d) Specialized training: Medical and mental health care
• Medical staff who perform forensic examinations must receive appropriate training.
• Maintain documentation of medical and mental health staff participation in required trainings.
• Ensure medical and mental health staff receive appropriate staff, volunteer, or contractor training, in addition to the specialized training described above.

However, in the event that external SANEs or SAFEs are not available to perform this task, this standard also includes specialized training for conducting forensic medical exams. Best practice is to conduct the exam outside the agency.
In addition to making victim advocates available to victims, the standards require outside confidential support services to be made available to all inmates/residents in a facility.

If an agency is unable to enter into an MOU with an agency to provide confidential support services, they have to demonstrate the attempt to do so.
Facilities must ensure that a coordinated response procedure has been developed, which clearly defines the responsibilities of first responders, medical and mental health staff, investigators and administrators. Often, this may take the form of a SART (Sexual Assault Response Team).

In particular, the first responder must ensure that these interventions are provided to victims. However, for investigators to know the services offered to victims following a report is important. Appropriate delivery of services will build trust between the victim and the agency, which may lead to more reporting and greater honesty in interviews. Similarly, informative answers to victim’s questions regarding emergency care will aid in relationship-building.
4 min

Access to Emergency Medical and Mental Health Care

The standards require agencies to offer victims timely access to necessary medical services, including emergency contraception and sexually transmitted infections prophylaxis at no cost and regardless of whether the victim cooperates with the investigation or names the abuser(s). The timely element of this is crucial, especially for prophylaxis and other treatments that only work for a certain period of time.

1 min

Access to Ongoing Medical and Mental Health Care

The standards also require agencies to provide ongoing care and referrals, if necessary.
Ensuring that victims receive timely access to appropriate healthcare can be extremely important in the context of sexually transmitted infections and pregnancy.

In the case of prisons and juvenile facilities, this ongoing care also includes some requirements for providing mental health treatment for abusers. Since the investigator will have contact with the victim and the perpetrator (if identified), the investigator should be sure to make the appropriate notifications to the persons within the agency who are responsible for medical and mental health interventions for both parties.

**The Forensic Medical Examination**

It is important for investigators to understand the process of the forensic medical examination, both to ensure that the investigator knows how to access and interpret any collected evidence, and to ensure that any conversation the investigator has with the victim prior to or following the exam is informed by the process. Many victims consider the process of the forensic medical exam to be extremely traumatizing and violating.

### 2 min

**Sexual Assault Nurse Examiner**

A Sexual Assault Nurse Examiner (SANE) is a registered nurse who has been specially trained to provide comprehensive care to sexual abuse patients; who demonstrates competency in conducting a medical forensic examination; and has the ability to be an expert witness.

A Sexual Assault Nurse Examiner (SANE) is a registered nurse who has been specially trained to provide comprehensive care to sexual abuse patients; who demonstrates competency in conducting a medical forensic examination; and has the ability to be an expert witness.

“Forensic Nurses specialize in caring for victims and perpetrators of violence. They care for the physical, psychological, and social
trauma that occurs in patients who have been sexually abused. Forensic nurses also have a specialized knowledge of the legal system and collect evidence, provide medical testimony in court, and provide consultation to legal authorities.”

IAFN – Texas Chapter

A forensic medical examination is a medico-legal physical examination to retrieve evidence to support an allegation of sexual abuse for future prosecution. The examination, collection of evidence, and documentation of injury may be necessary either to substantiate an allegation or to help strengthen a case. The goal is to provide interventions that improve the physical and mental health and well-being of sexual abuse survivors – by decreasing the acute and long term effects of the abuse and helping to return the victim to their previous functioning state.
Medical Examination for Sexual Abuse Victim

If reported within 96 hours:

- a medical examination of the victim of the sexual abuse for use in the investigation or prosecution of the offense may be requested

A victim always has the choice to not undergo an exam.

Dual Purpose of the Forensic Exam

The forensic medical exam has two purposes. The primary purpose is the address the medical needs of the victim. The secondary purpose is the assist in investigating the abuse by collecting any evidence that may exist.

Medical Examination for Sexual Assault Victim

Check your jurisdiction to establish the correct timeframe for this slide. Some jurisdictions limit the timeframe to 72 hours; others have extended the timeline to 120 hours or longer.
The Prison Rape Elimination Act of 2003 recommends that medical services provided to incarcerated victims should be no less than the care received by a victim in any health care facility/setting, and PREA standard 115.83 (c) requires provision of community level of care. In a situation of sexual abuse, a victim’s status as an inmate or resident should not detrimentally affect the care they receive.

Victim Adaptations

- Age
- Gender/gender identity
- Disabilities
- Culture, ethnicity, religion
- Sexual orientation
- Victimization history
- Abuse by an authority figure
- Coping – support available
- Consent/assent for exam

The examination is adapted as necessary to address the needs and circumstances of the victim – physical and psychological.

It is important to avoid making assumptions about the victim and the abuse. Discussions with the victim are framed in such a way that does not assume they are of a specific background. Medical practitioners try and understand their circumstances and tailor the exam process to address their needs and concerns. If
It is important to prepare the victim prior to beginning any procedure. This also aids in restoring the victim’s physiological and emotional sense of predictability and control over what’s happening.

Once consent is obtained from the patient, a medical history is taken to determine injuries and appropriate medical treatment. The next step is a head-to-toe examination, including the anogenital area, in order for the SANE to document trauma to any part of the body. Lastly, a collection of forensic evidence is done.

<table>
<thead>
<tr>
<th>First Steps</th>
</tr>
</thead>
</table>
| **Step 1:** Affidavit – Giving Consent  
Patient Information |
| **Step 2a:** History of Assault |
| **Step 2b:** Medical History |

Once it has been decided that a sexual assault kit will be utilized,
the seals are broken, and the kit opened. This is the first step in the chain-of-custody.

**Step 1:** Giving consent. The victim (or guardian) MUST give consent for this examination. In extenuating circumstances where consent cannot be obtained (such unconsciousness or impairment) a next-of-kin may be contacted for consent (with witnesses) and/or a court-order may be necessary.

**Step 2a:** History of assault. A more detailed description of the assault. The “who, what, when, where, how” of forensics. Was the perpetrator known? Were there threats? Did the victim fight? Did ejaculation occur? What positions was the victim forced into? Is there any area where biological evidence may be found?

Edmond Locards’ Principle of forensics states that: “With contact between two items, there will be an exchange.” That’s what the forensic exam is after – the exchange…the evidence. Our forensic field: the victims’ body.

**Step 2b:** A complete medical history of the victim. This includes: past surgeries/injuries; pregnancies; and any existing conditions or communicable diseases.

<table>
<thead>
<tr>
<th>2 min</th>
<th><strong>Step 3: Clothing Collection</strong></th>
</tr>
</thead>
</table>

A head-to-toe assessment is completed on all exposed areas of the body to get as much evidence as possible prior to having the victim disrobe. All injuries are documented:
• Type (such as bruises, lacerations/cuts, abrasions, scratches, etc.)
• Location
• Size (measurement of injury in length & width) and color
• A collection of any foreign debris/object not normally found on the body (such as: grass, twigs, sand, dirt)

Once the head-to-toe assessment is completed and any evidence found has been collected:

1. The victim is asked to stand on a paper sheet provided in the kit and to disrobe.
2. Clothing is removed and placed upon the paper sheet.
3. Once undressed, the victim is provided a sheet and assisted onto the exam table and/or chair.
4. The clothing is examined for any tears, stains, or blood. If any are found, they are marked appropriately.
5. Each article is bagged separately in paper bags and labeled with identifiers, along with the date and time of examination/collection.

Facilities should be aware that the victim’s clothing will be collected as evidence, and bring a change of clothing with the victim to replace the collected clothing.

1 min  

**Step 4: Debris Collection**

Once the victim has disrobed, any foreign objects that are found on the body during the examination will be placed in this envelope. If fingernail scrapings and clippings are obtained, each hand is done separately and labeled accordingly.
After oral inspection and documentation of injuries, swabs are obtained for DNA and ACP (prostatic acid phosphatase, which is found naturally in both men and women – with higher concentration found in semen). Swabs are done by briskly rubbing the inside of both cheeks (buccal area) for several seconds. Then a smear is made on the glass slide for microscopic examination. Oral swabs can be just as important as vaginal or rectal swabs.

A detailed genital trauma assessment is performed. Inspection of the genitalia prior to collection of evidence is of utmost importance in order to note any injuries and to document all findings on the appropriate diagram.
For the male victim, the presence of saliva on the penis could indicate that oral-genital contact was made; feces or lubricant (such as saliva, grease, oil, etc.) may be found if rectal penetration occurred.

**Step 7: Rectal Swab & Smear**

Any and all injuries are noted. Any tears, bruising, etc., color, measurement in centimeters, and location are documented. Swabs are obtained from around and in the anal opening, and a smear is made on the glass slide.

**Step 8: Head Hair Combings**

During sexual abuse, hairs may be transferred from one individual to the person or clothing of another. These hairs can be microscopically compared to known hair samples from both the victim and suspect to determine the origin.

Head and pubic hair are the only hairs on the body that have enough individual characteristics for analysis. Delaying the
collection of hair samples of the victim may adversely affect comparisons.

<table>
<thead>
<tr>
<th>1 min</th>
<th><strong>Step 9: Pulled Head Hairs</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Although DNA is much more reliable from good buccal swabs, pulled hair is still recommended for hair comparisons. Cuttings of hair without the root are of little forensic use. At this time forensic examiners typically comb for foreign hairs and pull known hairs from the victim to provide the best samples for comparative studies.</td>
</tr>
</tbody>
</table>

| 1 min | **Step 10: Pubic Hair Comblings**
**Step 11: Pulled Pubic Hair** |
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Biological evidence (such as: blood, semen, saliva) may be found in the matted hair.</td>
</tr>
</tbody>
</table>
Step 12: Blood Sample
Step 13: Saliva Sample

Saliva can also be used for ABO blood typing of the attacker. About 80% of individuals can be genetically typed from this marker.

Final Steps

- Police evidence seals are affixed where indicated on box-top, dated & initialed by examiner.
- ALL Information requested on kit box-top under “For Hospital Personnel” is to be filled out.
- The Biohazard label is affixed where indicated.

After ensuring that all envelopes, boxes, slides, blood tubes, paper bags, etc. are properly labeled and tape securely, the evidence is placed into the box and the box is sealed. Once sealed, it cannot be re-opened.

Tampering with Evidence is a felony!
This page includes the male and female anatomy and all injuries should be documented on the appropriate chart. This is the victim’s information sheet.

The following are documented on this sheet:

• Medications and/or treatment that were given and/or ordered
• Tests that were performed, such as lab work and specimen collection for STIs
• Contact information for follow-up care, including the victim’s practitioner and mental health services provider

It is important to always remember that the absence of injuries does not mean that sex was consensual or that the sexual abuse did not occur.
The presence or absence of physical evidence does not prove whether a person has been sexually abused. Rather, the examination may provide supportive evidence to be used during legal proceedings. Documentation is a form of communication to other professionals working on the case. In a case hearing, one must be able to define every word that is documented!

<table>
<thead>
<tr>
<th>3 min</th>
<th>Access to Victim Advocates</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Survivors need and deserve access to rape crisis services.</td>
<td></td>
</tr>
<tr>
<td>• PREA standards require agencies to attempt to make a victim advocate available to survivors.</td>
<td></td>
</tr>
<tr>
<td>• Access to advocates may also be required by federal and state laws.</td>
<td></td>
</tr>
</tbody>
</table>

Why are victim advocates necessary? Sexual abuse in custody takes a considerable toll on survivors, their loved ones, detention facilities, and the community.

Inmate/resident survivors need and deserve rape crisis advocacy services, and most practitioners are not trained in rape trauma services, including trauma and rape crisis counseling. Additionally, some states require these services by law.

<table>
<thead>
<tr>
<th>1 min</th>
<th>The Rape Crisis Model</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Survivor-centered</td>
<td></td>
</tr>
<tr>
<td>• Goal is empowerment</td>
<td></td>
</tr>
<tr>
<td>• Focus on managing immediate trauma symptoms and assisting the survivor to regain control and to heal</td>
<td></td>
</tr>
<tr>
<td>• A problem-solving, non-directive approach</td>
<td></td>
</tr>
</tbody>
</table>

- Survivor-centered
• Goal is empowerment
• Focus on managing immediate trauma symptoms and assisting the survivor to regain control and to heal
• A problem-solving, non-directive approach

This model has shown to be effective for all survivors.

1 min  The Role of the Victim Advocate

What is the role of victim advocates? Support. They can assist in getting consent and providing explanations. They can be staff or volunteers and may or may not be on-call all the time. Either way, they go through extensive training and are certified.

5 min  Unique Role of the Victim Advocate

The victim advocate is unique in that their sole focus is on the safety and well-being of the victim. As a result, they can maintain confidentiality and be available to the victim throughout the day.
survivors to do this multiple times, and their last sexual encounter was painful and unwanted.

Rape crisis services fall into one of three categories: acute care, follow-up care, and longer-term care. Your interactions with the victim advocate will be during the acute and follow-up care stages.

A victim advocates are supposed to be both informed and open-minded. They align themselves with the survivors and inform them of their rights.

Additionally, they will negotiate the survivors’ privacy and comfort during interviews and exams.
Finally, they will prepare the survivors to return to custody.

<table>
<thead>
<tr>
<th>5 min</th>
<th><strong>Role of the Advocate in Investigative Interviews</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>- Accompany survivors during interviews.</td>
</tr>
<tr>
<td></td>
<td>- Provide emotional support and information regarding the investigative process.</td>
</tr>
<tr>
<td></td>
<td>- Will not participate in the interview or serve as a translator.</td>
</tr>
<tr>
<td></td>
<td>- Assist the survivor to address his or her needs during the interview, such as taking a break, when needed.</td>
</tr>
</tbody>
</table>

The role of the advocate during interviews is to provide support and information. The advocate will not participate in the interview unless specifically asked to do so, and will not serve as a translator. He/she will be solely focused on the needs of the victim.

Investigators should view victim advocates as partners. Victims are more likely to cooperate and to fully and honestly discuss the abuse if they are supported and as comfortable as possible. The victim advocate will provide the support and work to enhance the victim’s comfort so the investigator can focus on his/her job.

What are the strengths and challenges of working with a victim advocate during an investigation?

Discuss.
You may find there is some resistance to an “outside” person.
### 1 min  Role of the Advocate in Providing Ongoing Care

<table>
<thead>
<tr>
<th>Role of the Advocate in Providing Ongoing Care</th>
</tr>
</thead>
<tbody>
<tr>
<td>• May be able to provide follow-up services via phone, by mail, or in-person</td>
</tr>
<tr>
<td>• Can assist survivors’ in their healing to manage the long-term impact of trauma and to participate in the investigative process</td>
</tr>
<tr>
<td>• Services are usually free and confidential</td>
</tr>
</tbody>
</table>

Victim advocates will remain in contact with the victim to assist in managing the long-term impact of trauma and to allow the victim to participate more fully in the investigative process.

### 5 min  Victim Advocates and Confidentiality

<table>
<thead>
<tr>
<th>Victim Advocates and Confidentiality</th>
</tr>
</thead>
<tbody>
<tr>
<td>• In some states, advocates are legally required to keep client information confidential.</td>
</tr>
<tr>
<td>• They may be bound by professional ethics and legal standards of licensing bodies.</td>
</tr>
<tr>
<td>• Advocates cannot disclose information, including names of perpetrators to the facility.</td>
</tr>
<tr>
<td>• Advocates give survivors the tools they need to make their own decisions.</td>
</tr>
</tbody>
</table>

States vary in the legal requirements that exist around victim advocates, but many have specific educational requirements. In general, though, do not ask advocates to disclose information from their conversations with victims.
The Benefits of Advocates

Advocates reduce survivors’ trauma and improve investigations in the following ways:

- Advocates increase survivors’ wellness and help them to cope with the trauma of the sexual abuse.
- Survivors are likely to feel more comfortable with the investigation if they have an advocate.
- Survivors who feel comfortable and supported are more likely to participate in the investigative process, which increases the likelihood of a successful investigation.

To reiterate, investigators should view victim advocates as potential partners who can benefit the investigative process and make the investigator’s job easier.

Questions?
